Evan Richardson

Senior Software Engineer | .NET • React • AWS

evan-richardson.com | (507) 269-5518 | ejrich44@gmail.com | github.com/ejrich | LinkedIn

Senior Software Engineer with nearly a decade of experience designing and deploying performant, scalable, fault-tolerant services within the .NET and AWS ecosystems. Expert in modernizing mission-critical enterprise systems and leveraging agentic AI workflows to optimize SDLC and increase engineering velocity.

EXPERIENCE

Software Engineer/Senior Software Engineer - *Direct Supply, Milwaukee, WI*

SE June 2019 - November 2021, SSE November 2021 - Present

- Engineered full-stack ecommerce workflows that enabled customer self-service, eliminating thousands of hours of manual backend intervention.
- Designed and implemented new product search integration, driving a 3x increase in clickthrough/conversion rates through greatly improved facet relevancy and search quality.
- Architected and developed a new user registration workflow that reduced manual customer setup and directly registers users to the ecommerce site.
- Leveraged Agentic AI to automate migration of projects from .NET Framework to .NET Core and Linux, resulting in increased performance and reduced hosting cost.
- Reengineered the marketing email contact sync to ensure data integrity and increase throughput by eliminating redundant operations.
- Mentored multiple interns and developers through explaining system architecture and code reviews, reducing onboarding time and local setup from weeks to days.

Software Engineering Intern - *Direct Supply, Milwaukee, WI*

December 2016 - May 2019

- Developed desktop and web applications for ecommerce, sales, and transaction systems in C#, React, and Angular.
- Automated sales tax calculation by integrating Google Maps Geocoding API to resolve malformed address data.

Software Engineering Intern - *Mayo Clinic, Rochester, MN*

June 2016 - December 2016

- Developed a Python application for automated PCB testing to replace a legacy existing system.
- Built a Node.js web application to visualize vial data stored in a Sql Server database.

Skills

Languages: C#, Typescript, SQL, Python, C++, VB6
Frameworks/Libraries: .NET Core/Framework, ASP.NET, React, Node, Angular
Cloud/DevOps: AWS, Terraform, Docker, GitLab CI, Jenkins, Octopus
Databases: SQL Server, PostgreSQL
Tools: Git, Vault, Jira, Agile/Scrum

Technical Projects

Custom Programming Language Compiler | GitHub

- Architected and implemented a new programming language and compiler in C#, featuring a hand-written lexer and recursive parser with a custom intermediate representation (IR) for executing code during compilation, and using LLVM for code generation and optimization.

Text Editor | GitHub

- Engineered a high-performance editor built using my custom programming language and the Vulkan graphics API for hardware-accelerated rendering.
- Implemented Vim keybindings, source control integration, terminal, debugger, file and free text search, and integrations with LLM APIs for reading and editing files.

EDUCATION

Bachelor of Science in Software Engineering, Minor in Mathematics

Milwaukee School of Engineering, May 2019 Graduate

- Magna Cum Laude
